

Insights & Persona

Hair ICP – Stage 2 vs Stage 3

Based on: 272 S2 male responses + 306 S3 male responses + 213 customer call verbatims + 60 NPS responses

1. Who They Are

	Stage 2	Stage 3
Age	18–26 yrs (67% of base). Students and working professionals.	22–34 yrs. Working professionals dominate.
Occupation	Students ~45%, Private sector ~30%, Engineers ~9%	Private sector ~40%, Students ~28%, Business/freelance ~12%
Hair condition	Frontal recession, mild thinning. 54% reduced density. 30% are actually preventive (S1).	Crown + frontal loss visible. 78% reduced density. 7% are actually S4. Bald patches present.
Emotional distress	6.8/10. Fear-driven but manageable.	7.2/10. Higher distress. Crown loss harder to hide.
Doctor visit rate	25% visited a dermat before MM.	41% visited a dermat before MM. More clinical-minded.
Kit purchase	Partial kit / BG-only common. Gummies as entry hook.	61% buy full kit. 31% buy partial/BG-only (high churn risk).

One-Line ICP

- **S2:** 18–26 yr old student/young professional who spots frontal recession, sees a relatable Instagram ad, gets his friend’s confirmation, and buys hoping to stop losing what he has. Will panic at shedding in week 3 and quit before month 2 if no one tells him it’s normal.
- **S3:** 22–34 yr old working professional with visible crown + frontal loss, who has already tried Thriveco/Traya/home remedies and been disappointed. Researches on Gemini + YouTube + reviews. Buys the full kit hoping for bald-patch regrowth. Will silently churn in month 2–3 if doctor doesn’t deliver a specific milestone roadmap.

2. What They’re Actually Buying

	Stage 2	Stage 3
--	---------	---------

Core motivation	PRESERVATION. “Jitne hai utne bachana chahta hoon.” Insurance against S3.	REVERSAL. “Bald patches pe baal wapas chahiye.” Get back what’s already gone.
What they expect	Hairfall stops. What I have stays. Quick signal in 4–6 weeks.	Baby hair on bald spots. Visible regrowth. Specific month-by-month milestones from the doctor.
Messaging that works	“Baal bachao” not “baal ugao.” “Abhi shuru nahi kiya toh Stage 3 tak pahunch jaoge.”	“Bald areas mein wapas aana.” Month 4–6 crown recovery journey. Before/after on bald patches.

3. What They Were Doing Before MM

Pre-MM cluster	Stage 2	Stage 3
Did nothing	43% – first-time treaters. Ignored until mirror shock or mummy noticed.	31% – ignored for 1.5–2 years. External trigger (wedding, job, mirror) finally broke the pattern.
Oils / home remedies	16%. Coconut, onion, castor oil. “Kuch nahi hua 6 months mein.”	18%. More varieties tried for longer. Desperate attempts including “secret website oils.”
OTC shampoos	12%. Clinic Plus, H&S, Pilgrim. Dandruff relief only.	14%. Same. Shampoo-only approach = known failure for S3.
D2C brand switcher	14%. Plix, Thriveco, Pilgrim, Traya. “Thriveco ka koi result nahi.”	22% – HIGHEST cluster. Brand-burned and skeptical. Traya: “too complex.” Thriveco: “no result.”
Dermat / Rx	8%. Local dermat, generic minox. Moved online for convenience.	10%. PRP tried and failed. Generic minox tried. MM brand trust > pharmacy generic.
Key insight	Most are clinical first-timers. Low research, impulse + peer nudge.	Most have tried and failed at least once. High research, skeptical, need more proof.

4. How They Find Us + Convert

	Stage 2	Stage 3
#1 trigger	Relatable Instagram/YT ad (37%). “Ad mein mera same situation tha.”	Friend/family result evidence (35%). Must SEE visible result on friends, not just recommendation.
#2 trigger	Friend/roommate recommendation (32%). “Dost ne mangwaya. 4 log mere circle mein use karte hain.”	Relatable ad + reviews loop (35%). Ad alone not enough. Needs comments section, reviews validation.
#3 trigger	Mirror shock / visible hairfall (20%). Photo or video call reveals hairline.	Full protocol promise (25%). “MM ka full system tha – shampoo, spray, gummies, roller, doctor.”
Conversion journey	SHORT. 1 relatable ad + 1 friend’s nod = purchase. Single-step works.	LONG. Ad → YouTube research → Gemini/ChatGPT comparison → reviews → friend proof → doctor promise.
Research depth	Low. Instagram ad + friend. Price check, not ingredient check.	High. Compares MM vs Traya on Gemini. YouTube journey videos month 3–6. Reads comment sections.
Primary channel	Instagram ads (discovery + conversion).	Instagram (discovery) + YouTube (research) + Gemini/ChatGPT (validation) + Friend result (closer).
Competitor threat	Bare Anatomy (“cheaper + 4 week claim”).	Traya (“more clinical, more thorough”). Transplant as parallel option for advanced S3.

5. Purchase Drivers

Functional

Driver	Stage 2	Stage 3
Primary goal	Stop hairfall (65%). “Save what I have.”	Regrowth on bald patches (70%). “Reverse what’s gone.”

Doctor credibility	55%. Free consult = #1 reason for choosing MM.	60%. Doctor 41%. NPS promoters: “Doctor consultation helpful” = top reason.
Safety / tested	48%. “Too many chemicals” = #1 put-off. Needs reassurance.	45%. Already past chemical anxiety. Wants proof of safety, not avoidance.
Simple routine	30%. “Traya ka login tough. MM ka simple – Do hi products.”	Less relevant. 61% buy full kit. Accepts complexity if it works.
Price point	28%. Budget ₹500–1K (50%). ₹900 = low barrier.	25%. Budget ₹500–1K (56%). Cost anxiety grows over 6-month protocol.

Emotional

Driver	Stage 2	Stage 3
Confidence	70%. #1 across all S2 data.	72%. #1 across all S3 data. Higher distress (7.2 vs 6.8/10).
Social judgment	45%. “Side se udde huwe lagte hai.” Cap to hide hairline.	45%. Crown loss harder to hide. Every cap-removal = anxiety event.
Dating / career	40%. Presentability, interview anxiety, dating confidence.	22% dating, 30% “look young.” Crown loss = age-marker. Career image acute.
Genetic anxiety	20%. “Papa ka tha.” Knows where it’s going.	10%. Less about genetics, more about reversing visible loss now.

6. Barriers & Frictions

Barrier	Stage 2	Stage 3
Results too slow	55%. #1 frustration. “Results take too long” = 29/94. Most in shedding phase – education failure, not product failure.	60%. #1 frustration. “No growth on bald spots after 3 months.” Bald patch regrowth needs 4–6 months. 58% rate 1–2/5.

Usage confusion	40%. Every cohort. “Minox baalo pe ya scalp pe?” 38% dose correctly, 21% overdose, 15% underdose.	Equally high. Kit more complex: product sequencing, dermaroller timing, shampoo-before-minox not communicated.
Shedding panic	35%. Week 2–6 hairfall not warned. “Baal kyu jhadenge?” = product failure in user’s mind.	30%. Even more alarming at S3 – already anxious. Additional shedding without warning = catastrophic.
Routine gaps	30%. “Forgot to apply.” Travel, dirty hair, winter night application.	28%. More holistically engaged but still struggles with daily routine.
Cost	22%. “Bahut mahanga 6 months ke liye.” Budget ₹500–1K.	25%. Longer treatment + more products. Cost anxiety grows without visible results.
Side effects fear	20%. “Minoxidil se addiction hoga.” Mostly pre-use, resolves with doctor.	Lower. Already decided on medication. Fear = long-term dependency, not initial safety.
Doctor gap	12%. “Free call band ho gayi after bulk order.”	25%. “Doctor timeline baar baar badha deta hai.” Inconsistent quality = trust collapse.
Transplant exit	Not relevant.	8%. S3+ not seeing results research transplants. Hard to reactivate.

7. Three Strategic Truths Per Stage

Stage 2

- **1. They buy insurance, not regrowth.** “Jitne hai utne bachana.” “Stage 2 se Stage 3 nahi jaana.” But MM ads lead with regrowth (S3 creative). Structural messaging misalignment at scale.
- **2. Shedding phase is the #1 self-inflicted retention crisis.** ~55% of detractors cite slow results or unexpected hairfall. Not a product failure – zero pre-communication. Every dropout generates negative WoM that kills the referral engine (32% of S2 comes from friends).
- **3. Usage confusion is the most predictable churn accelerator.** Present in every cohort regardless of age, city, tier. Minox dosage: 38% correct, 21% overdose, 15% underdose. A Day-1 WhatsApp video eliminates this entirely.

Stage 3

- **1. They want regrowth, not preservation.** Opposite of S2. Bald patches visible. “Baby hair on bald areas by month 4–5” is the right creative. Doctor must set a credible milestone at first consult.
- **2. One ad is not enough – they’re deliberate researchers.** They’ve been burned before. Gemini, YouTube, comment sections. Full-funnel required: TOF ad → MOF comparison content → BOF friend proof + doctor promise.
- **3. Doctor consult sets expectations – if it fails, they churn.** Needs: specific month-by-month milestones, shedding warning, mandatory Month 3 check-in. “Doctor baar baar timeline badha deta hai – I don’t trust this.” Quality inconsistent across panel.

8. So What – Next Quarter Priorities

Messaging & Creative

- **S2 creative:** Preservation-first. “Abhi shuru nahi kiya toh Stage 3 tak pahunch jaoge.” Cap removal shock. Week-by-week hairfall reduction. Stop showing crown recovery in S2 ads.
- **S3 creative:** Bald-patch reversal. Month 4–6 crown area journey. Dedicated S3 ad set, not shared with S2. “Meri tarah jo Stage 3 mein unke liye yeh hai.”
- **Comparison content:** S3 buyers compare on Gemini/ChatGPT. Own this: blog, YouTube, structured data. Price + simplicity + doctor = our angle vs Traya.
- **Competitor framing:** Bare Anatomy = S2 threat. Traya = S3 threat. Different responses per stage.

Onboarding & Retention

- **Day 1 WhatsApp video:** 60-sec application demo + shedding phase warning. Non-negotiable for S2 + S3.
- **S2 Month 2 auto-trigger:** Doctor check-in. Highest churn moment. Usage audit + shedding status + expectations reset.
- **S3 Month 3 auto-trigger:** Doctor check-in. Bald patch regrowth starts month 3–4. Catches them before they quit.
- **Prescription on WhatsApp:** Within 30 min of every consult. Currently missing for many users.

Doctor Consult

- **S2:** Pre-empt shedding. 6-week hairfall reduction milestone. Hindi explanation for Tier 2/3.
- **S3:** Mandatory milestone map: Week 4–6 hairfall slows → Month 2–3 density up → Month 4–5 baby hair on crown → Month 6 visible regrowth. This = retention anchor.

- **Standardise:** “Traya ka doctor bahut descriptive tha – MM ka doctor time nahi deta.” Fix the inconsistency. Make milestone map mandatory output from every consult.
- **Decouple from order:** Tie consult to 6-month usage window, not order quantity.

Product & Protocol

- **S2 upsell:** Gummies = entry. Post-consult upsell to full protocol (minox + gummy + shampoo).
- **S3 BG-only rescue:** 31% buy partial – guaranteed detractors. Month 1 outreach: “Gummies alone won’t restore bald patches.”
- **Stage misclassification:** 30% of S2 = actually S1. 35% of S3 = closer to S2. 7% of S3 = actually S4. Doctor must flag and adjust.
- **Cetosomal upgrade:** Advanced layer positioned as “doctor-recommended upgrade” during consult. Key AOV lever.

Acquisition

- **S2:** Instagram-first. Single ad + friend referral. Vernacular Hindi for Tier 2/3. Peer referral program (32% comes from friends).
- **S3:** Full funnel. TOF ad → MOF YouTube/blog comparison → BOF friend proof + doctor promise. Single-step doesn’t work.
- **S3 YouTube:** Month 3–6 crown journey content = the S3 closer. Invest in S3-specific journey creators.

Positioning

Man Matters Hair Regrowth Brand Positioning

Where We Stand And Why Now

We've done the work.

- 100+ NPS calls with existing customers. 100+ interviews with recent new customers. Multiple rounds of market research and competitive study. We reverse-engineered Traya end-to-end. Their funnel, their kits, their coach model, their content engine, their pricing.
- We tested cetosomal minoxidil on ourselves before putting it in front of customers. We've spent 9 months building the product, the protocol architecture, and the clinical evidence to back it.
- Avinash's recent hair creator reel went viral. The demand signal is real: men want to talk about hair loss, they want solutions that work, and they want a brand that takes this seriously.

The P&L proves the model works.

- Man Matters overall CM3 is now 15% – up from negative CM3 just 12 months ago.
- Hair contributes 23% CM3. This is a high-margin, high-retention category when done right.
- Traya is 4x our size. But we have no less of a product portfolio and no less of a platform. Our repeat rates are similar to Traya's.
- The only gap is NC volume and AOV. That's a positioning and distribution problem, not a product problem. This doc solves the positioning half.

The window is now.

- Cetosomal minoxidil gives us a genuine product moat. 2–3x deeper penetration, no competitor has this. This is the time to reposition.
- We can build a stronger narrative than Traya: clinical science > Ayurveda for the modern Indian man who wants proof, not tradition.
- We need to build an army: hair creators, doctors, and loyal customers who become evangelists. The flywheel is content → trust → trials → results → advocacy.
- If we don't build now, we miss the bus. The men's hair loss market is consolidating. Traya is scaling aggressively. Every quarter we delay, the gap widens and the cost to close it doubles.
- We have the products. We have the data. We have the conviction. Now we execute.

Why This Update

- Our current positioning is product-led: “Buy our hair growth products.” Traya’s is protocol-led: “Get a personalised plan that solves your root causes.”
- We sell individual SKUs at ₹900 AOV. They sell treatment plans at ₹2000-3000/month. Same base ingredients, but their framing commands 2x the price.
- Cetosomal minoxidil (2–3x deeper penetration) is launching. We need positioning that justifies premium kits, not just new SKUs.
- This doc reframes hair from product → doctor-led holistic treatment protocol, anchored to our three brand pillars.

What Traya Does

Their Positioning

- One-liner: “India’s #1 holistic hair loss solution using Ayurveda, Dermatology, and Nutrition.”
- Core narrative: Hair loss has multiple root causes (DHT, gut, stress, nutrition, scalp). They treat all of them together.
- Model: Free hair test → Doctor diagnosis → Customised monthly kit (₹1,699–3,500) → Hair coach for accountability → 5-month money-back guarantee.
- Claims: 93% success rate after 5 months (internal study, Dec 2022). 12L+ users treated.
- Moat: Strong UAC and App Acquisition, YouTube 800K+ subs, heavy creator program, vernacular content, 70% non-metro.

What They Do Well

- Consultation-first funnel: customer feels diagnosed, not sold to. Creates trust + higher willingness to pay.
- Hair coach system: weekly check-ins, WhatsApp support. Creates accountability + retention.
- Money-back guarantee (5 months): removes risk perception. Locks customers in for 5 months.
- Ayurveda angle: resonates culturally in India. Gut health, stress, dosha narrative feels “holistic” to consumers.
- Content engine: consistent YouTube, community, creator content. Organic moat.

Where They’re Vulnerable

Traya Weakness	What It Means	Our Opportunity
Ayurveda-heavy formulation	Nasal drops, gut shuddhi, herbal teas – perceived as pseudoscience by a large segment. No advanced delivery tech.	CETOSOMAL® technology, FDA-approved actives, clinical evidence. Doctor-led science positioning.
Generic minoxidil	Standard 2%/5% minoxidil. Same as OTC everywhere. No formulation edge.	Cetosomal minox (2–3x penetration), 10% minox, oral minoxidil. Real product moat.
Complex routine	5+ pills/day, oils, nasal drops, diet changes. High compliance friction.	Simpler protocols. Fewer products, higher efficacy per product. “Designed for busy Indian men.”
Unisex brand	Traya serves both men and women. Diluted identity.	100% men’s brand. Every product, protocol, clinical trial is for men.
No advanced Rx molecules	No oral minoxidil, no topical finasteride, no cetosomal. Limited formulary.	Broader, more potent treatment toolkit. Doctor prescribes what’s right for the stage.
Retention via coach, not product	If coach quality drops, retention drops. Human-dependent moat.	Product efficacy + doctor-led protocol as primary retention. Coach as support layer.

Our Right to Win

- We have a genuinely stronger product portfolio. Traya’s edge is narrative and distribution, not formulation.

Dimension	Traya	Man Matters
Treatment model	Ayurveda + Dermatology + Nutrition	Doctor-led holistic protocol – diagnose root causes, prescribe stage-specific treatment, monitor + adjust

Core actives	Standard minoxidil 2%/5%, Redensyl, Ayurvedic herbs	Cetosomal Minox (2–3x), 10% Minox, Oral Minox, Derma Roller
Routine	5+ products/day, nasal drops, diet plan, oils	Streamlined: topical + gummy per stage. Add-on layers only when needed.
Price	₹2000–3,000/month	₹900–15000/month (kit-based, comparable)
Delivery tech	None. Standard topical application.	CETOSOMAL® – patented delivery for deeper follicular penetration
Clinical evidence	Internal study (2022), 93% claim	FDA-approved actives + clinical tests on Indian men
Product range	Ayurvedic supplements, standard minox, oils, shampoo	Rx + non-Rx: oral minox, cetosomal minox, finasteride, DHT blockers, derma roller, biotin
Target	Men + Women (unisex)	100% men. Built for Indian male physiology.

The insight:

- Traya won by making hair loss treatment feel personalised and holistic. But their product toolkit is basic – standard minoxidil + Ayurvedic supplements.
- We can match their narrative (doctor-led holistic treatment, personalisation, ongoing support) while bringing genuinely superior formulations.
- The positioning: we’re not competing on “Ayurveda holistic.” We’re competing on “doctor-led holistic treatment with the most effective formulations available in India.”

The Three Pillars

Pillar	What It Means	How It Shows Up in Hair
Highest Quality	Best-in-class ingredients, third-party lab tested, multiple certifications	FDA-approved Minoxidil + Finasteride. CETOSOMAL® tech (2–3x penetration). Alcohol-free. Added actives for Hydration
Effectiveness	Doctor-led holistic approach that addresses all root causes	92.7% see results in 5–6 months. Protocols address DHT + nutrition + scalp health + lifestyle together. Doctor diagnoses, prescribes, monitors.
Made for Modern Indian Men	Designed for Indian conditions and lifestyles	Alcohol-free for humid climate. Clinical tests on Indian men (not foreign studies). Simple protocols for busy lives. Doctors who understand local context.

Revised Positioning

The Shift

From	To
“Buy our hair growth products”	“Get diagnosed by a doctor. Get a holistic protocol designed for YOUR hair loss.”
Product-led	Doctor-led holistic treatment system
Single-factor (DHT / Minoxidil only)	Multi-factor holistic: DHT + nutrition + scalp + lifestyle
Symptom treatment	Root cause resolution through doctor diagnosis
One-size-fits-all	Personalised by stage + root causes + scalp condition
Compete on product	Compete on treatment outcomes

Core Statement

- **FOR** modern Indian men experiencing hair loss
- **WHO** want effective, doctor-backed treatment – not trial-and-error with random products
- **MAN MATTERS IS** India’s most effective doctor-led hair regrowth system

Built on:

- **Highest Quality** – FDA-approved ingredients with Minoxidil, Finasteride and advanced tech like CETOSOMAL® delivery (2–3x deeper penetration).
- **Effectiveness** – Doctor-led holistic protocols that address all root causes (DHT, nutrition, scalp, lifestyle). 92.7% see results in 5–6 months.
- **Made for Modern Indian Men** – Alcohol-free for Indian scalp. Clinical tests on Indian men. Convenient protocols that fit busy lives. 20L+ men have seen results

The Promise

- The highest quality ingredients. Doctor-diagnosed, holistic protocols proven across 20L+ men. Designed specifically for you. That's Man Matters.

One-Liner

- “India’s most effective doctor-led hair regrowth system – highest quality ingredients, holistic protocols, made for modern Indian men.”

vs Traya’s One-Liner

- Traya: “India’s most trusted holistic hair loss solution using Ayurveda, Dermatology, and Nutrition.”
- Us: Doctor-led clinical effectiveness vs their Ayurveda-led trust. Their “holistic” = Ayurveda + broad but shallow ingredients. Our “holistic” = doctor diagnoses all root causes + prescribes advanced clinical formulations.

How It Works

Step 1: User Selects Stage-Based Treatment

- User takes the hair assessment (Stages PDP/quiz / AI scalp checker / WhatsApp) and self-identifies their hair loss stage.
- Based on stage, they see the recommended base protocol – stage-matched topical + gummy.
- User can then select the Advanced layer (cetosomal minox + derma roller) and shampoo add-ons for maximum efficacy
- This is the entry point – low friction, self-serve, stage-based. User picks and purchases.

Step 2: Doctor Consultation + Full Diagnosis

- Post-selection (or post-purchase), the doctor consults the patient for a complete diagnosis.
- Doctor evaluates: medical history, age, lifestyle factors (stress, diet, sleep patterns), existing conditions, previous treatments tried.

- Based on this holistic diagnosis, doctor may recommend changes to the protocol:
- Upgrade to Advanced layer if stage warrants it but user didn't select it.
- Add or change shampoo layer based on actual scalp condition (moderate → severe or vice versa).
- Prescribe Rx products (oral minoxidil, topical finasteride) if medically appropriate.
- Adjust dosage, usage frequency, or add lifestyle modifications.
- The doctor makes the protocol holistic – what the user self-selected is the starting point, the doctor refines it based on root causes.

Step 3: Ongoing Support via App + Doctor

- Post-purchase, the app becomes the treatment companion:
- Progress tracking – scalp photos every 2 weeks, visual timeline of change. (WIP)
- Treatment reminders – daily nudges for minoxidil application, gummy intake. (WIP)
- Doctor check-ins – scheduled reviews to assess progress, adjust protocol, address concerns (shedding, side effects, timeline). (WIP)
- Hair coach access – WhatsApp + in-app chat for day-to-day queries and motivation. (WIP)
- This continuous loop (use product → track progress → doctor reviews → adjust if needed) is what drives compliance, results, and retention. (WIP)

Result: Regrowth

- 93% see visible results in 5–6 months on complete doctor-guided protocol.

How this compares to Traya:

Step	Traya	Man Matters
Entry	Free hair test → algorithm assigns kit	User self-selects stage-based treatment via PDP/quiz / scalp checker
Doctor role	Coach call (not a doctor). Algorithm-driven.	Doctor does full diagnosis post-selection – medical history, age, lifestyle – and refines protocol.
Treatment	Ayurvedic herbs + standard minox + diet plan	Layered protocol: base (topical + gummy) + advanced (cetosomal + derma roller) + shampoo (by severity). Doctor adjusts.
Post-purchase support	Hair coach (WhatsApp, weekly calls)	App (progress tracker + reminders) + doctor check-ins + hair coach. Continuous loop.

Guarantee	100% money-back after 5 months	TBD – considering 4+2 model (commit 4 months, we fund next 2)
-----------	--------------------------------	---

Key Messaging (Pillar-Anchored)

Pillar	Primary Message	Proof Points
Highest Quality	“The best ingredients, delivered better.”	FDA-approved actives. CETOSOMAL® 2–3x penetration. Alcohol-free. Multiple certifications.
Effectiveness	“Doctor-led holistic treatment. 92.7% see results.”	Doctor diagnoses all root causes. Layered protocols (base + advanced + shampoo). 5–6 month results. Clinical trials on Indian men.
Made for Indian Men	“Designed for your scalp. Fits your life.”	Alcohol-free for humid climate. Simpler routine than alternatives. Doctors who understand Indian context. Tested on Indian physiology. 20L+ men have seen results

Messaging vs Traya:

- **They say:** “Holistic 3-science approach – Ayurveda + Dermatology + Nutrition.”
- **We say:** “Doctor-led holistic treatment. Advanced formulations prescribed for your specific stage and scalp condition.”
- **They say:** “93% success rate.” (2022 internal study, mixed gender)
- **We say:** “92.7% see results in 5–6 months.” (On Indian men specifically, protocol-compliant.)
- **They say:** “Customised for you.”
- **We say:** “Doctor-diagnosed. Stage-specific. Holistic treatment – not just a product.”

- Key difference: both of us say “holistic.” Traya means Ayurveda + gut + nutrition. We mean doctor diagnoses all root causes + prescribes layered clinical treatment. Same word, stronger substance.

What Changes in Practice

Before	After
User self-selects stage / product	Select stage + Treatment efficacy + scalp condition
“Choose your treatment”	“Get diagnosed. Get the right holistic protocol.”
Doctor as optional value-add	Doctor as the prescriber at the centre of the system
Dandruff shampoo sold standalone (₹550 AOV)	Shampoo prescribed as Layer 3 based on scalp severity (moderate vs severe)
Minox as standalone product (₹882 AOV)	Cetosomal Minox is the Advanced layer (Layer 2) for Stage 2/3/4
NC AOV: ₹900	Target NC AOV: ₹1,200–1,500 via layered protocols
Messaging disconnected from pillars	Every message anchors to Quality, Effectiveness, Made for India
Complex explanation	Simple: Diagnose → Prescribe holistic protocol → Support

Execution AMJ

Hair – Path to ₹200 Cr

Context

- Hair = ₹10.9 Cr/month (Jan '26). Need ~₹17 Cr/month for ₹200 Cr.
- Gaps vs Traya: AOV (₹900 vs ₹2,500), Behind in UAC, minimal regional (they're 70% non-metro), no content moat (YT 500K subs, community 83K).
- Lever: cetosomal minoxidil launch + kit architecture.

Where We Are (Jan '26)

P&L

Metric	Jun '25	Sep '25	Nov '25	Jan '26	Trend
Net Sale	₹8.07 Cr	₹8.64 Cr	₹10.46 Cr	₹10.94 Cr	+35%
NC (WebApp)	23,887	24,474	31,795	35,199	+47%
NC AOV	₹870	₹869	₹894	₹900	Flat
RC AOV	₹717	₹753	₹801	₹798	+11%
GP%	73.3%	74.4%	76.7%	75.0%	Healthy
CM2%	22.8%	23.6%	25.7%	24.6%	Improving
STR	27.6%	27.6%	29.5%	28.8%	Stable
CAC	₹824	₹828	₹866	₹781	Improving

- NC volume scaling (+47%). NC AOV flat at ~₹900 – core problem.

Product NC Split

Product	NC	NC AOV	RC	RC AOV	Share	M3 Ret.
HG Stages (kits)	12,339	₹1,084	22,313	₹842	35.7%	17–18%
Minox standalone	10,628	₹882	23,415	₹790	30.7%	13–15%
HG standalone	4,088	₹696	8,883	₹759	11.8%	8–10%
Dandruff	3,151	₹550	3,214	₹684	9.1%	~10%
Minox Stages (kits)	2,781	₹1,079	4,971	₹822	8.0%	17–19%
Others	1,589	₹632	4,214	₹756	4.6%	—

- **Kits working:** 43.7% of NC, ₹1,050–1,084 AOV, 17–19% M3. Push to 55%+.
- **Minox standalone drags AOV:** 30.7% at ₹882. Self-diagnosers. Migrate to kits.
- **HG standalone unviable:** ₹696 AOV, 8% M3. Kit add-on only.
- **Dandruff = kit component:** ₹550 solo doesn't work. In kits: +₹400–500 AOV, better outcomes.
- **Minox Stages = AOV lever:** 8% of NC but ₹1,079 AOV, 19% M3. Grow to 20%+ via Advanced Minox.

Retention (Sep '25 cohorts)

Product	Cohort	M1	M2	M3	Read
S3 Kits	2,039	24.2%	19.6%	16.7%	Best
Minoxifin	3,084	20.8%	19.4%	16.6%	Best
Growmax	2,653	15.7%	14.8%	13.0%	OK
HG standalone	2,477	18.7%	12.4%	8.2%	Cliff

- S3 Kits + Minoxifin hold ~17% at M3. Protocol = compliance.
- HG standalone: 18.7% → 8.2% M3. Try gummies, don't see results, leave.

Channels

Channel	Revenue	Share
WebApp	₹8.57 Cr	78%
Amazon	₹0.95 Cr	9%
Flipkart	₹0.54 Cr	5%
Quick Commerce	₹0.34 Cr	3%
Others	₹0.54 Cr	5%

- Spend: Meta ₹1.4 Cr, Google ₹1.18 Cr, Apple ₹2.5L, Influencer ₹6–8L, CRED ₹7L.
- Google = all Search/Shopping. Zero UAC. Biggest gap.
- Influencer ₹6–8L/month. Traya does 50+ collabs continuously.
- App NC% declining: 51% (Dec '24) → 40% (Jan '26).

Meta by Product

Product	Spend	NCs	CAC	AOV	ROAS	ATC%
Stage 2	₹48.4L	3,912	₹1,628	₹938	0.58	13.3%
Stage 3	₹35.1L	2,910	₹1,588	₹1,005	0.63	8.4%
HG	₹11.5L	~1,167	~₹1,300	~₹740	~0.57	~10.5%

- S3 better ROAS (0.63) on higher AOV. Give it more spend.
- S3 ATC 8.4% – biggest experiment surface. +2% = 200+ NCs/month.
- HG least efficient. Shift budget to Stages + Advanced kits.

NC Strategy

1. PDP Experiments

- S3 ATC 8.4% → 11%+. S2 ATC 13.3% → 15%+.
- Test narratives: clinical results, problem-led, before/after social proof, doctor-led.

- ATC drop-off: Meta retarget 24hrs, WhatsApp abandoned cart (₹100–150 off, 48hr expiry).
- Test checkout coupons: flat vs % vs free shipping.

2. Vernacular PDPs

- Growth from UP, Rajasthan, Bihar, MP. Hindi-belt.
- Hindi + Telugu PDPs first. Local testimonials, adapted imagery. Not just translations.
- Regional ad traffic → vernacular landing pages. Never English PDPs.
- Hindi + Telugu: 6–8 weeks. Tamil, Kannada, Bengali: next quarter.

3. Google UAC

- Single biggest acquisition gap. Zero UAC today.
- **M1–2:** UAC for Installs, Tier 1. 5+ video creatives (before/after, doctor, UGC, routine, science).
- **M3–4:** UAC for Actions. Optimize for consult booked / first purchase.
- **M5+:** Regional UAC with vernacular creatives.
- Targets: CPI < ₹100, install-to-purchase >15% in 14 days, CPA < ₹400.

4. Regional Influencers

- Current: ₹6–8L/month. Need 5–10x.
- 50–100 micro-influencers (10K–50K). Barbers, local lifestyle. Not fitness models.
- Full kit. Document 3–4 month journey. Monthly check-ins.
- Unique referral codes. Track cost per NC per creator.
- 50 creators Q1, 100+ Q2.

5. YouTube

- 15–20 creators, ongoing series. Journey vlogs, myth-busting, doctor collabs.
- Own weekly series: in-house dermatologist. Science-first.
- 30–40 videos/month across owned + creator.
- Measure: branded search lift, organic traffic, subs, referral conversions.

NC AOV Strategy

- Current: ₹900. Target: ₹1,400–1,800. Single biggest revenue lever.
- Kits at ₹1,050–1,084 (43.7% NC). Minox solo ₹882 (30.7%). HG solo ₹696 (11.8%).
- 55%+ kit mix + Advanced Minox kits at ₹1,800–2,500 = revenue works without growing NC.

1. Advanced Minoxidil (Cetosomal) Kits

- Kit-first. Don't default to standalone.
- **Essential:** Adv Minox + Anti-Thinning Shampoo + Derma Roller – ₹1,799–1,999
- **Pro:** Adv Minox + Keto Shampoo + Fin Topical + Supplements + Derma Roller – ₹2,499–2,999
- Dandruff (keto shampoo) = kit component. Not standalone paid.
- 20% of business = ~1,500–1,800 kits/month at ₹2,000 avg.
- Experiments: kit vs standalone as default PDP, 2–3 price points, doctor-prescribed vs self-select.

2. Stage-Based Acquisition

- Stage 2 → Basic. Stage 3 → Advanced (Cetosomal). Stage 4+ → Pro (oral + topical).
- Protocol pages, not product pages. Timeline (M1, M3, M6), products, rationale.
- Stage 3 = volume play. 12,339 NC at ₹1,084. Push to ₹1,400–1,600 with Adv Minox.
- **Shift:** “Buy product” → “Follow treatment plan.”

3. Personalised Funnels

- **AI Scalp Checker:** Photo → stage grading → protocol recommendation. High-engagement entry.
- **WhatsApp Consult:** Tier 2/3 users. 5–7 Qs + photo → kit recommendation + payment link.
- **Enhanced Quiz:** Diagnostic. Hair health report before product recommendation.
- Experiments: scalp checker as landing page vs PDP, WhatsApp pilot 3 Tier 2 cities, quiz with report vs without.

Retention

- M3 retention: 8% (HG) to 18% (S3 kits). Every 5% improvement compounds hard.
- Repeat = ₹5.4 Cr/month (63% of WebApp hair). This is the P&L driver.

1. App + WhatsApp Companion

- Progress Tracker: scalp photo every 2 weeks. Visual timeline. Drives engagement + UGC.
- Treatment Reminders: daily push for minox, supplements. Compliance = outcomes = retention.
- Coach Access: one-tap chat in app.

WhatsApp journey:

- D1: Welcome + how-to video. D7: Check-in. D14: Progress photo. D30: Education. D45: Replenishment nudge. D60: Similar customer before/after. D90: Celebrate + next plan.

Product Roles

Product	Role	Action
HG Stages (S2/S3)	Core acquisition	35.7% → 40%+. Best retention. Upgrade AOV via Advanced.
Minox Stages	AOV engine	8% → 20%. Cetosomal kits. The AOV leap.
Minox standalone	Refill only	Deprioritise NC. Refill for kit users. 30.7% → ~20%.
HG standalone	Bundle add-on	Stop standalone acquisition. Kit add-on only.
Dandruff	Kit component	Zero standalone paid. In kits: +₹400–500 AOV.
Derma Roller	Kit add-on	Every kit. High perceived value, low COGS. Replacement cycle.
Supplements	Kit add-on	Inside + Outside. Doctor-prescribed for deficiencies.

Quarterly Plan

Q1: Apr–Jun '26 – Foundation

- **NC:** PDP experiments (3–4). Remarketing + WhatsApp cart. UAC install Tier 1. 50 creators. Customer content. Own YouTube weekly.
- **AOV:** Adv Minox kits live. Kit-default PDP. Protocol pages. Enhanced quiz. Scalp checker v1.
- **Retention:** Progress tracker. WhatsApp journey for kits. Coach for ₹1.5K+ orders. 4+2 pilot (500).

Metric	Jan '26	Q1 Target
NC AOV	₹900	>₹1,100
Adv Minox mix	0%	15–20%
UAC installs	~0	10K+/mo
S3 ATC%	8.4%	>11%
4+2 sign-ups	—	500
Revenue	₹10.9 Cr	₹12–13 Cr

Q2: Jul–Sep '26 – Scale + Regional

- **NC:** PDP winners scaled. Hindi + Telugu PDPs. UAC → Actions. Regional UAC. 100+ creators. 30–40 videos/mo. WhatsApp consult pilot. Community 3–5K.
- **AOV:** Adv Minox 20%. Doctor-prescribed kits tested. Funnels optimized from Q1.
- **Retention:** WhatsApp refined. 4+2 expanded. App community. Sub with progressive discounts.

Metric	Q1 Exit	Q2 Target
NC AOV	~₹1,100	>₹1,400
Adv Minox mix	~18%	20%+
Regional NC	~15%	>25%
90-day ret. (kits)	~17%	>20%
Revenue	₹12–13 Cr	₹14–16 Cr

Q3: Oct–Dec '26 – Full Throttle

- **NC:** UAC ₹20L+/day. 5 languages. 100+ creators. YT 100K subs. Referral. Festival push.
- **AOV:** 4+2 standard for Advanced. Cross-category bundles (hair + nutrition).
- **Retention:** Subs 15K+. AI progress. 40+ coaches. Community 10K.

Metric	Q2 Exit	Q3 Target
NC AOV	~₹1,400	>₹1,600
NCs/month	~35K	40K+

6M retention	~30%	>40%
Revenue	₹14–16 Cr	₹16–18 Cr

Q4: Jan–Mar '27 – Prove Run-Rate

- **NC:** All channels CM-optimized. Regional 35%+. Organic SOV parity. Offline pilots.
- **AOV:** Adv Minox 20% steady. Maintenance kits for 6M+ users. AOV ₹1,800+.
- **Retention:** Subs 25K+. 6M retention 45%. LTV >₹5,000.

Metric	Q3 Exit	Q4 Target
Revenue	₹16–18 Cr	₹17–19 Cr
NC AOV	~₹1,600	>₹1,800
Active subs	15K	25K+
LTV	~₹3,500	>₹5,000
FY27 total	—	₹195–220 Cr

The Three Bets

- **1. Kits move AOV.** Adv Minox kits at 20% → AOV ₹900 → ₹1,600+. Revenue works at current NC. Kits already at ₹1,080 vs ₹882 standalone. Most certain.
- **2. UAC + regional unlocks growth.** Zero UAC, declining app NC%, no non-metro. Fix these = 2–3x addressable market.
- **3. 4+2 fixes retention.** M3: 8% (HG) to 18% (kits). 4+2 locks 6 months. 6M retention 25% → 40%+ = LTV doubles.
- Traya proved the market. We have stronger products (oral minox, 10% minox, cetosomal). Job = execution.
