

OBJECTIVE

Move warm audiences from awareness to intent. Target: men who have seen an MM ad or visited the site but haven't purchased. Remove the specific beliefs that are blocking conversion: chemical fear, minox confusion, stage misidentification, trust in oils and shampoos.

AUDIENCE

S2 ICP	Seen the ad. Told a friend. Still on the fence. Primary block: 'Too many chemicals' (48% cite this). Also confused about whether he's S2 or just stressed. Budget is not the block — fear is.
S3 ICP	Did YouTube research. Compared MM vs Traya on Gemini. Primary block: doesn't trust that MM is different. Also wants a realistic month-by-month timeline before committing.
Mindset	S2: 'Is minox safe for me? Do I really need this?' S3: 'I need to understand exactly how this is different before I spend again.'

CAMPAIGN ROLE

MOF = 20% of total creatives. This is the proof layer. Four content sub-themes across S2 and S3:

Sub-Theme	Stage	One-line Job
Safety & Science of Minoxidil	S2 primary S3 secondary	Eliminate chemical fear. Replace 'too risky' with 'clinically proven safe'.
Hair Loss Stage Education	S2 primary	Help him accurately self-identify as S2. Create urgency to act before bald patches develop.
Myth-Busting: Oils & Shampoos	S2 + S3	Break faith in coconut/onion oil. Replace with mechanism-level understanding of what actually reaches a follicle.
S3 Diagnosis & Reversal Timeline	S3 primary	Deliver a realistic month-by-month milestone roadmap so S3 knows exactly when to expect baby hair on crown.

CREATOR BRIEF — BY SUB-THEME

THEME 1: SAFETY & SCIENCE OF MINOXIDIL (S2-PRIMARY)

JTBD
Reassure me that Minoxidil is clinically safe and tell me the complete science — does it actually solve hair loss or just delay it?

Talking Points (must hit all)

- FDA-approved. Clinically tested. Not a supplement, not herbal — a regulated molecule
- Mechanism: increases blood flow to follicles, extends the anagen (growth) phase
- What addiction really means: follicles remain active only while you're on it — not dangerous dependency
- Minox surface-level vs cetosomal minox: deeper penetration = better results
- Shedding in Weeks 2–6 is expected — it is a sign of follicle activation, not failure

What to Avoid

- 'Minoxidil is completely safe, trust me' without the mechanism — too vague
- Over-reassurance without explaining the shedding phase — this causes post-purchase churn

THEME 2: HAIR LOSS STAGE EDUCATION (S2-PRIMARY)

JTBD

Help me accurately identify that I am at Stage 2, understand what is happening to my follicles, and feel the urgency of acting before bald patches develop.

Talking Points (must hit all)

- Walk through the Norwood scale visually — show him where S2 is vs S3
- DHT miniaturises follicles progressively. S2 follicles are stressed, not dead — reversible if caught now
- 'Abhi shuru nahi kiya toh Stage 3 tak pahunch jaoge' — this is the core S2 fear and it is factually true
- Early intervention = higher success rate. Show a real S2 user who stopped progression
- Self-diagnosis is often wrong — 30% of perceived S2 buyers are actually S1. Doctor consult corrects this

What to Avoid

- Crown recovery or bald patch content — wrong stage, wrong expectation
- Vague 'catch it early' language without the biological explanation

THEME 3: MYTH-BUSTING — OILS & SHAMPOOS (S2 + S3)

JTBD

Break my belief that coconut oil, onion oil, or anti-hairfall shampoo is doing something meaningful — replace it with the truth about what actually reaches follicle level.

Talking Points (must hit all)

- Oils coat the hair shaft — they do not penetrate the scalp to reach follicles
- Shampoo treats the scalp surface and not solve hairfall — it does not stop DHT-driven miniaturisation
- The molecule that reverses follicle miniaturisation (Minoxidil) requires active delivery technology to reach the follicle
- 6 months on oils with no result = not a patience problem — a mechanism problem
- S2: redirect to the right treatment. S3: closure on why past attempts failed structurally

What to Avoid

- Disrespecting the tradition of oils — reframe, do not mock

- Generic 'oils don't work' without the biological explanation of why

THEME 4: S3 DIAGNOSIS & REVERSAL TIMELINE (S3-PRIMARY)

JTBD

Help me understand Stage 3 and give me a realistic, doctor-backed month-by-month roadmap so I know exactly when to expect baby hair on bald patches.

Milestone Map to Hit (verbatim)

- Month 1-2: Hairfall rate slows
- Month 3-4: Baby hair appears on bald patches
- Month 5-6: Visible regrowth on crown

Talking Points (must hit all)

- DHT is the root cause — follicles are miniaturised, not dead. Reversible with the right protocol
- Standard Minox cannot reverse S3 alone because it lacks sufficient follicular penetration
- Minoxifin (Minox + Finasteride topical) + Cetosomal Minox = dual-mechanism. Addresses blood flow AND DHT blockage
- Doctor prescribes the roadmap. Not algorithm-assigned. Real dermatologist, real milestone map
- 'I finally understand why nothing worked before' — give him narrative closure on past failures

What to Avoid

- Vague 'results in 5–6 months' without the milestone breakdown — S3 needs specifics or he churns
- Comparison without clinical backing — stay factual

CREATOR SPECS

S2 Themes 1–3	Dermatologist or doctor (science-accessible style) + Creator who experienced hair loss themselves/Have good authority. Must be reassurance-led, not alarm-led.
S3 Theme 4	Dermatologist (milestone roadmap format) + S3 creator who documented crown recovery. Tone: specific, credible, not motivational.
Format	90 sec. Talking head, whiteboard, or product demonstration. No hype music, no fitness-style editing.
Distribution	Instagram Reels (primary). YouTube Shorts.
